

Setting the date/time

How to change the date/time on the Ranger

Written By: Geoff Henshaw

INTRODUCTION

The Ranger date/time is automatically synchronized to a Global Time Server when connected to the internet via WiFi.

Step 1 — Setting the date/time

- ❗ The Ranger automatically synchronizes its date/time to a Global Time server when connected to the internet via WiFi.
- ❗ If the Ranger date/time is incorrect because it is being used in a different time zone then correct this by setting the correct time zone (go to the Settings guide)
 - If the Ranger date/time is incorrect because it hasnt been connected to the internet for a long time then set the date/time by connecting it to the internet via WiFi (see Connect Ranger to WiFi guide).
 - Once the Ranger has successfully connected to a WiFi network with internet access, turn it off and then back on. Wait 30s and you will see the date/time change to the correct values on the reading screen.
